SOUNDSCAPE | BIG DATA

People are demanding the professionals to design and build smart, sustainable cities. Whether a citizen is happy about the living environment depends very much what he or she sees, smells, feels and hears. Among which, we believe that making it nice and pleasant to hear the combined sound of the nature with the man-made ones is very important in the city planning and urban design processes.

SOUNDSCAPE DESIGN BY BIG DATA

We believe a nice & pleasant acoustic ecosystem can be designed through analysis of big sound data, and collaboration with city planners, architects, engineers, landscape architects, psychologists and other professionals.
